Palliative Care

Cipla Palliative Care & Training Centre

Cipla set up the palliative care centre in Pune in 1997 to provide free-of-cost care to patients with advanced cancer and to support their families. The Centre operates on a unique family care model. A strong multi-disciplinary team care for patients and their families at the Centre. They also extend free-of-cost palliative care through home care services in the community and out-patient (OPD) services at hospitals

Reached out to **15,500+** patients
and their families since 1997

Doorstep Health

Chronic Medicine Dispensation Units

The Foundation in South Africa has established five chronic medicine dispensation points for patients who otherwise have to collect their medication from government health facilities. This provides greater convenience for patients and has helped with greater treatment adherence as well as decongested the government health facilities.

More than **20,000** units of medication dispensed in 2018-19

Strengthening Access

Maternal & Newborn Health

We are supporting strengthening of primary healthcare services to reduce preventable pregnancy deaths among women by establishing referral linkages between maternity homes, general and tertiary hospitals. We are currently supporting the process of building an accountable urban healthcare system and responsible communities in seven municipal corporations of Maharashtra, India

Over **100,000+** connects with the communities through interventions, training, awareness, counselling and Referrals in 2018-19

Training Palliative Care Professionals in Communities

Together with National Health Mission ,Government of Maharashtra and Aga Khan Health Services (India), we are supporting an innovative project to integrate palliative care into the Non Communicable Disease (NCD) programme. We have started with 2 blocks (Bhor and Purandar) in Pune district, Maharashtra. The aim is to ensure that the health care system in these blocks is responsive to palliative care needs.

In 2018-19, we supported the training of **240+** ASHA workers and **35+** district doctors and medical officers

Technological innovations for health training

We partner with Project ECHO to support a guided practice model of medical education. It is a web-based hubspoke platform where specialists share their knowledge and mentor health care providers in local communities. This exchange helps in better identification, evaluation and management of diseases.

24+ ECHO sessions conducted on autism and narrative therapy with **10+** ECHO sessions conducted on paediatric rheumatology in 2018-19

Respiratory Health

The Foundation has brought together institutions like AIIMS New Delhi, PGI Chandigarh, Asthma Bhawan and Chest Research Foundation (CRF) on a single platform to conduct public health research on the reasons and causative factors of asthma in children. Data will be used to understand respiratory conditions and inform health policy. This is the first-of-its kind study in India to provide evidence to care.

The research findings will be based on data collected from a **160,000+** strong respondent base.
